A Parent's Insight

EXPLORING THE DRAWBACKS AND BENEFITS OF ChatGPT & AI TECHNOLOGY

OAPCE 85 1939-2024

Potential for Bias: ChatGPT learns from a vast dataset of text from the internet, which may contain biases present in society. As a result, it can inadvertently generate biased or prejudiced responses, reinforcing stereotypes or discrimination.

Inability to Learn from Interactions: ChatGPT does not learn from individual interactions in real-time. It lacks the capability to adapt and improve its responses based on feedback from users, which can result in repetitive or unhelpful interactions.

Potential for Misinformation: Due to its reliance on existing data, ChatGPT may inadvertently generate misinformation or inaccurate responses, especially on topics where the training data is incomplete or outdated. Users must critically evaluate the information provided by ChatGPT and verify it from reliable sources when necessary.

Personalized Learning: ChatGPT can provide personalized assistance and support to students based on their individual needs and learning styles. It can offer explanations, answer questions, and provide additional resources tailored to each student's unique requirements, fostering a more personalized learning experience.

Immediate Feedback: ChatGPT can provide immediate feedback on students' queries and responses, helping them to quickly assess their understanding and progress. This real-time feedback facilitates active learning and enables students to address misconceptions or gaps in their knowledge promptly, leading to more effective learning outcomes.
